Optimum Alarm and Event management

Superior System Security

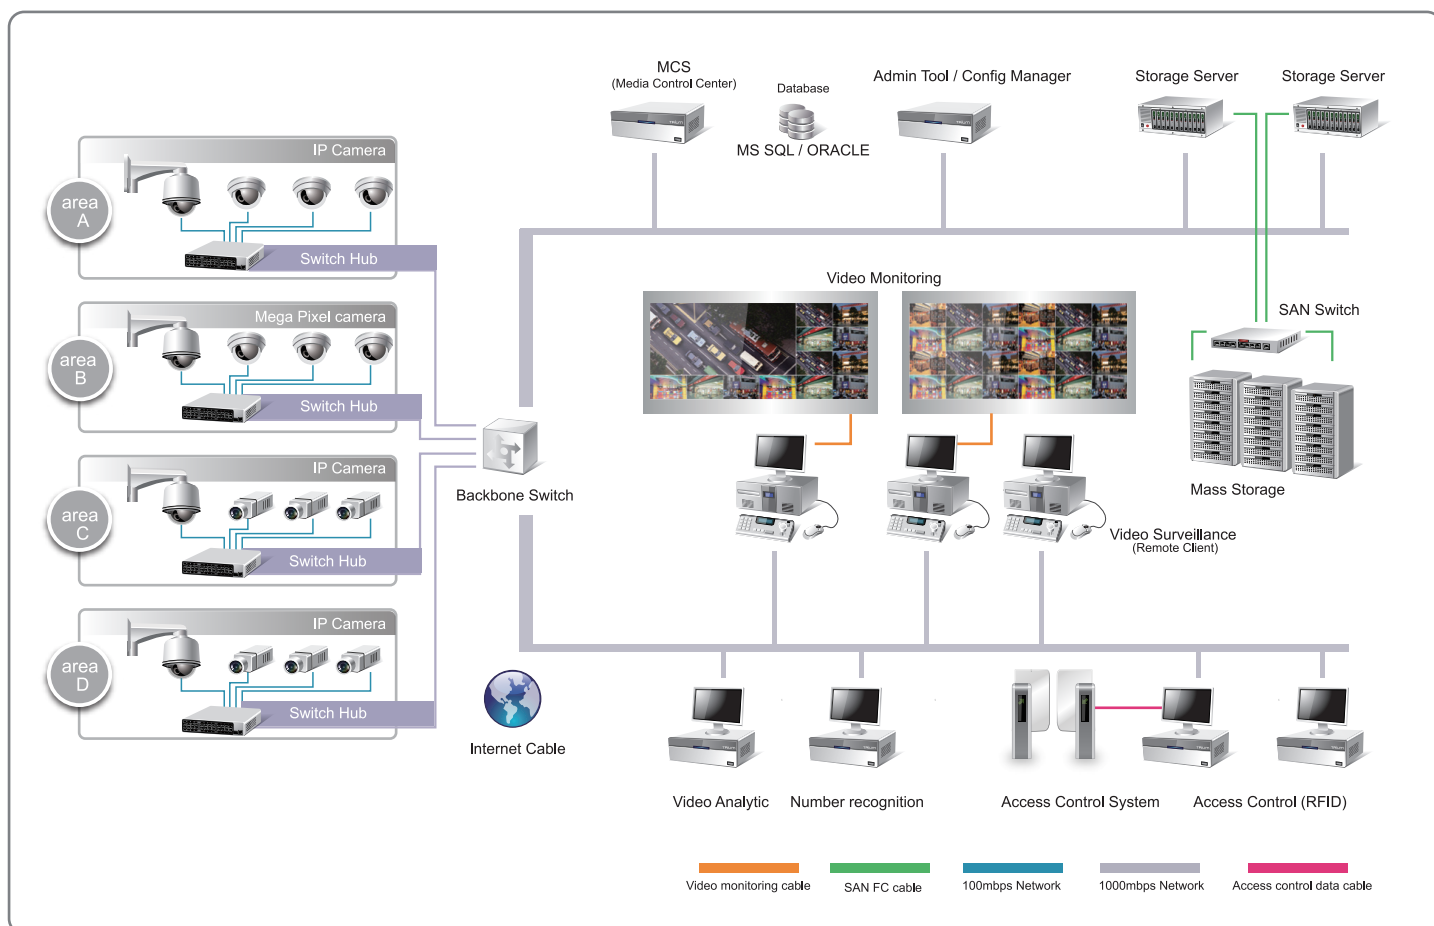

Fault Tolerant System (Fail Over function)

Search on Multiple monitors and Back up

Trium i is designed to manage security processes effectively and systematically from small scale (more than 16chs) to large scale systems (more than 8,000chs). It includes all the latest functions required by today's security professional and in a convenient way. Being able to process many channels of data simply, it controls image, audio, alarm data and metadata information on diversified environments as a complete enterprise platform. The software will be referred to and is classified as a VMS(Video Management System).
