

Trium-w

Construction Monitoring Software

About

The Trium W construction monitoring software is designed and build for monitoring builing projects in the most demanding environments. The software allows the user to connect and control multiple construction camera via the internet. In real life situation when the construction management team does not always operate on site the construction monitoring software is the best solution. The Construction manager can simply connect to the camera via the internet and our unique software will allow the user to view current site and its history. Then highlight areas of interest on the construction site to other members of the construction team. The aid of a picture ensures simple communication and that the project runs smoothly and in less time.

Key Feature

- Supports Megapixel cameras
- Saved archived images for a long period
- Supports up X number of remote user connections.
- Zoom in and out areas of interest.
- Save images, make measurements and send to other users
